Investment Highlights

TM's 1Q25 revenue growth was in line with guidance, but Ebit trailed due to higher customer acquisition costs. Construction of its DC (data centre) in Johor is on track, albeit only expected to be completed in 2H26. Meanwhile, growth prospects for its core segments are flattish due to mature markets and intense competition. We retain HOLD at a TP of RM6.60/share. Dividend yield is decent at 4%.

- **Reiterate HOLD at TP of RM6.60/share.** This is based on a target EV/Ebitda multiple of 5x and CY26 EPS. Our valuation includes its 51% JV stake with Nxera MY to construct a 64MW DC in Johor. Our HOLD call is premised on flattish earnings prospects, due to intense competition within its core businesses.
- **Revenue in line, but Ebit trailed guidance.** 1Q25 earnings declined 15% YoY to RM391mil. This is within expectations, forming 23% of ours and consensus estimates. Revenue growth of +0.5% YoY was within guidance, but Ebit (-16% YoY) was held back by higher costs. Recall, management guided for revenue growth of low single digit and flat Ebit.
- **Margins contracted on customer acquisition cost.** Cost as a % of revenue increased +3.7pp YoY to 82%. Direct cost rose 11% YoY, due to higher 5G traffic and device cost. Device cost was attributed to both its fixed and mobile business. On top line, growth was driven by TM Global (+2% YoY), offsetting slight declines at unifi (-0.7% YoY) and TM One (-0.6% YoY). unifi net adds slowed to +9k QoQ, while ARPU moderated 2% YoY to RM127/month.
- **Backhaul partner for second 5G network.** The group was appointed by U Mobile to provide 5G mobile backhaul services, with a value totaling RM2.4bil over ten years. Targets are to achieve an 80% coverage of populated areas within 12 months. The value of the contract is higher than the one signed with DNB in Dec 2021, which was worth RM2bil over ten years, as it includes other value-added services. While sizeable in value, this is within our assumptions, forming 2% of FY26F revenues.

Company profile

Telekom Malaysia (TM) is the country's leading fixed network operator. Its largest shareholder is Khazanah (20%) and the Ministry of Finance holds one golden share in the company, giving the government special rights to overrule decisions made.

TM has three main business divisions, unifi, TM One and TM Global. unifi is its retail arm, responsible for providing telco services and solutions to individuals, households and SMEs. TM One is responsible for SMEs, corporate and government customers. Meanwhile, TM Global is its wholesale arm, serving domestic and international carriers.

The group's assets include >720,000 km of domestic fibre optic cables, >340,000km of submarine cables and eight data centres. Its total workforce stands at 19k people.

Investment thesis and catalysts

Partnering Singtel for new data centre in Johor. TM entered into a 51:49 JV with Nxera MY to develop a data centre in Johor. The four storey 64MW data centre will cost RM1.2bil and can potentially be scaled up to 200MW over several phases. Targeted to be operational by 2H26, we estimate the business to form 10% of 2030 profits.

Challenges at unifi and TM One. Data centre aside, prospects for its core business are relatively flattish. unifi faces increased competition, which has impacted net adds, as mobile players penetrate into the fixed broadband segment. Upside to ARPU (average revenue per user) may also be capped, as the MSAP (Mandatory Standard on Access Pricing) is reviewed every three years, to ensure wholesale access prices are fair and reflective of market conditions. Meanwhile, TM One revenues have been on a declining trajectory (since FY17), as it faces price pressures from contract renewals.

Valuation methodology

Our target price is based on an EV/Ebitda multiple of 5.0x, which is consistent with the group's 5-year average. Our valuation also includes the group's 51% stake in its JV with Nxera MY to construct a 64MW DC in Johor.

Risk factors

Under the Mandatory Standard on Access Pricing (MSAP), wholesale prices are regulated, opening the door to heightened competition in the fixed broadband space and enterprise segment. Every 1% decrease in unifi ARPU lowers our earnings by 2%.

Its dividend policy is based on 40-60% of reported Patami, which may be influenced by one-off items.

EXHIBIT 7: FINANCIAL DATA
